1 What will be the output of the following code snippet?

```
def func(a, b):
  return b if a == 0 else func(b % a, a)
print(func(30, 75))
```

- a) 10
- b) 20
- c) 15
- d) 0

Answer: c) 15

```
2 numbers = (4, 7, 19, 2, 89, 45, 72, 22)

sorted_numbers = sorted(numbers)

even = lambda a: a % 2 == 0

even_numbers = filter(even, sorted_numbers)

print(type(even_numbers))
```

- a) Int
- b) Filter
- c) List
- d) Tuple

Answer: b) Filter

- 3) As what datatype are the *args stored, when passed into
- a) Tuple
- b) List
- c) Dictionary
- d) none

Answer: a) Tuple

4)
$$set1 = \{14, 3, 55\}$$

 $set2 = \{82, 49, 2\}$
 $set3 = \{99, 22, 17\}$

print(len(set1 + set2 + set3))
 a) 105 b) 270 c) 0 d) Error
Answer: d) Error
5) What keyword is used in Python to raise exceptions?
a) raise
b) try
c) goto
d) except
Answer: a) raise
6) Which of the following modules need to be imported to handle date time computations in Python?
a) timedate
b) date
c) datetime
d) time
Answer: c) datetime
7) What will be the output of the following code snippet?
print(4**3 + (7+5)**(1+1))
a) 248b) 169c) 208d) 233
Answer: c) 208
8) Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None

Answer: d) None

9) The python tuple isin nature.
a) mutable
b)immutable
c)unchangeable
d) none
Answer: b) immutable
10) Theis a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.
A. range()
B. set()C. dictionary{}
D. None of the mentioned above
Answer: a) range()
Question 11
Amongst which of the following is a function which does not have any name?
A. Del function
B. Show function
C. Lambda functionD. None of the mentioned above
Answer: c) Lambda Function
Question 12
The module Pickle is used to
A. Serializing Python object structure
B. De-serializing Python object structure
C. Both A and BD. None of the mentioned above
D. None of the mentioned above
Answer: c) Both A and B
Question 13
Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?
A. set() method
B. dump() method
C. load() methodD. None of the mentioned above

Answer: b) dump() method

Amongst which of the following is / are the method used to unpickling data from a binary file?

- A. load()
- B. set() method
- C. dump() method
- D. None of the mentioned above

Answer: a) load()

15.

A text file contains only textual information consisting of_____.

- A. Alphabets
- B. Numbers
- C. Special symbols
- D. All of the mentioned above

Answer: d) All of the mentioned above

16

Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.)

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
}
```

Enterprise Picard,

Voyager Janeway

Defiant Sisko

a) for ship, captain in captains.items():

```
print(ship, captain)
```

b) for ship in captains:

```
print(ship, captains[ship])
```

c) for ship in captains:

```
print(ship, captains)
```

d) both a and b

Answer: d) both a and b

17)

Which of the following lines of code will create an empty dictionary named captains?

```
a) captains = \{dict\}
```

- b) type(captains)
- c) captains.dict()
- d) captains = {}

Answer: d) captains = {}

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
b) captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
c) captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
```

d) None of the above

```
Answer: b)
```

```
captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
```

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
print(f"The {ship} is captained by {captain}.")
```

d) All are correct

Answer: b)

20)

```
for ship, captain in captains.items():

print(f"The {ship} is captained by {captain}")
```

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
```

```
"Defiant": "Sisko",

"Discovery": "unknown",
```

What statement will remove the entry for the key "Discovery"?

- a) del captains
- b) captains.remove()
- c) del captains["Discovery"]
- d) captains["Discovery"].pop()

Answer: c) del captains["Discovery"]
